

# Einrichtung FTP-Upload

## How do I set up the FTP upload under NetObjects Fusion 5 ?

### NetObjects Fusion 5

Click the button "Publish" 1 in the menu bar first and then on "Servers" 2.

There are two ways of publishing the pages:

# Einrichtung FTP-Upload

On the one hand the pages can be stored locally on the own computer and subsequently transferred to the FTP server by means of a FTP program ("Local"). On the other hand you can transfer the pages directly to the FTP server ("Remote").

Choose "Remote" and click "New Server" to create a new server profile.

Enter a name that describes the server or use the standard name in the field "Name" **1**.

Enter your provider's FTP host into the field "FTP Host" **2**.

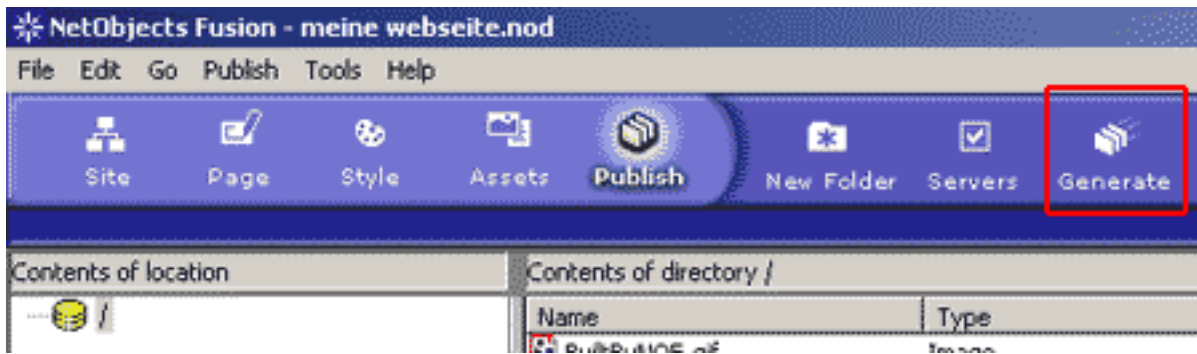

Enter your **main web directory "/www/data"** into the field "Directory" **3**. (case sensitive!).

Enter the **username from the activation eMail** into the field "User name" **4**. (case sensitive!).

Enter the **password from the activation eMail** into the field "Password" **5**.

Click "OK" to save the settings.

# Einrichtung FTP-Upload

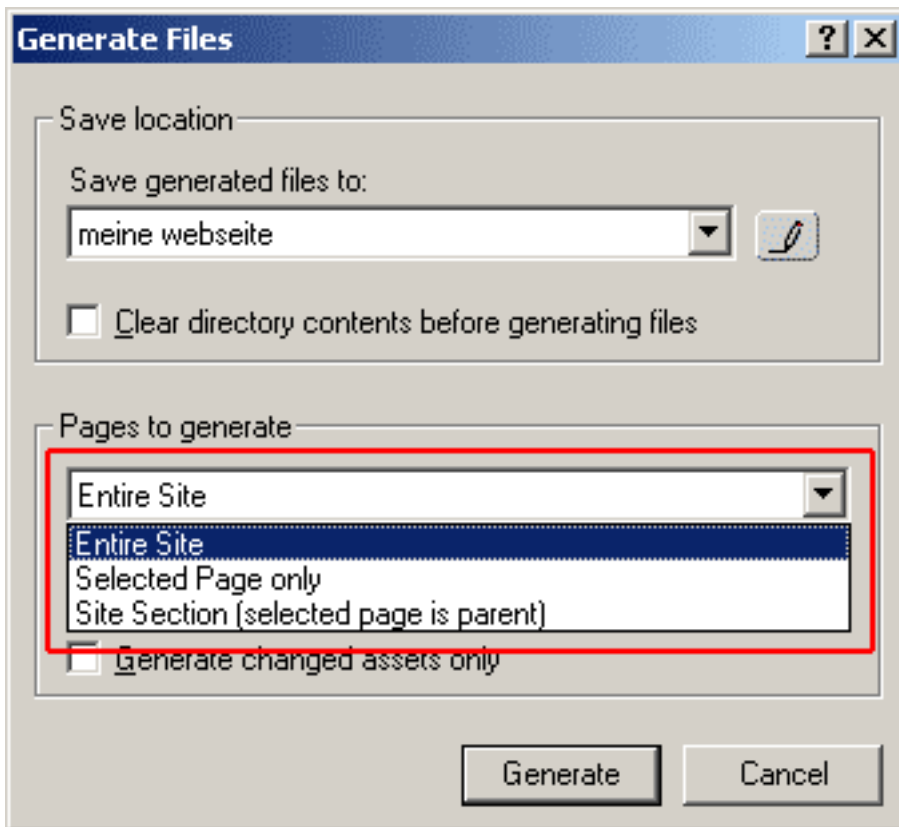

Navigate to the task bar and click "Publish" -> "Generate".

Select your saved server profile here **1**.

To edit the server profil click "Define Servers" **2**.

# Einrichtung FTP-Upload

Below you can select whether you want to transfer a whole page, only selected pages or just a paragraph.

Now click "Generate" to publish your website.
