

IMAP/POP3

Why does only 1 eMail arrive when redirecting/forwarding to 2 or more eMail addresses ?

This only occurs if both eMail addresses are pointing to the same eMail account (POP3/IMAPv4). The second eMail is then identified as the duplicate of the first one and deleted. That's totally normal and a wanted effect.

In case you are forwarding the eMail to several different providers please ask the respective provider where the error can be found.
