Pro-Option
What is the goal of the Pro-Option?

For some server series the Pro-Option allows to order additional services.

There is no "active" auxiliary service involved, it is a pure service fee for the additional order of extra services, partly free of charge e. g. IP Failover extension and partly fee-based such as VLAN Service.

Ordering only the Pro-Option without any concrete usage request makes no sense. It only makes sense if you want to use additional options. We furthermore do not offer the Pro-Option for some server series, that means that the additional Options are not available for this servers.

Finally it can be said that the Pro-Option is a commercial distinction of all servers from the beginner level to the business and professional class, and that it covers additional service including the Pro-Option (basic fee) and additional features.

Exemplary costs without the use of additional functions:
Pro-Option: 15, - EUR / month.
Total costs: 15, - EUR / month.

Exemplary costs when a fee-based additional function is used:
Pro-Option: 15, - EUR / month.
fictive service "ABC": 10, - EUR / month.
Total cost: 25, - EUR / month.

Exemplary costs when using three chargeable additional functions:
Pro-Option: 15, - EUR / month.
fictive service "ABC": 10, - EUR / month.
fictive Service "DEF": 10, - EUR / month.
fictive Service "XYZ": 10, - EUR / month.
Total cost: 45, - EUR / month.

If you use a second or additional feature / option, the Pro-Option *is not charged per option*, it is *charged only once*, which means that you will have a price advantage of 15 EUR beginning with the second option.
