Email

How do I use the additional fields of the form mailer ?

For using the additional fields of the form mailer for more information (ZIP, town, telephone number ...) you should follow these steps:

1. Log in to the customer center.

2. Choose your shared host contract.

3. Klick on **FORMMAILER**

4. Choose your existing form mailer or create a new one.

5. Give your definition into the fields "Field1, Field2, ...".

for example:

Field1:	street
Field2:	ZIP
Field3:	town
Field4:	telefone number
Field5:	fax

Provide your assignment of the fields in the field "text body".

Text body:	street: {{field1}} ZIP: {{field2}} town: {{field3}} telefone number: {{field4}} fax: {{field5}} ====Begin text message==

As soon as an eMail is sent from the form mailer, you get an eMail. It states the defined fields first, then (according to the example above) a separation with "====Begin text message====" and then the text of the inquiry follows.
