

Confixx

How do I make special settings in Confixx (openbase_dir / safe_mode) ?

To make special settings proceed as follows:

1. Log in as admin.
2. "Einstellungen"
3. "http Spezial"
4. "für einen Kunden ändern"
5. enter: *php_admin_value open_basedir none*

Maybe it's necessary to switch off the SafeMode.

To this the same procedure as above is required, though another entry has to be made:

php_admin_flag safe_mode Off
