Confixx

How do I fix the error "Internal error (questions_mode)" ?

- Log in to the root server via SSH.
- Change the directory to /root/confixx
- Open up "/root/confixx/confixx_main.conf" and change the value from $no_questions_mode = '1'; to $no_questions_mode = '0';
- Change the directory to /root/confixx/admin
- Open up "/root/confixx/confixx_main.conf" and change the value from $no_questions_mode = '1'; to $no_questions_mode = '0';

Done. The error has been successfully fixed.
