

# IMAP/POP3

## Information about IMAP / IMAP folders / filters

### Subfolders:

Under IMAP Subfolders can **only** be created beneath the INBOX.

### Filter:

A classification of the eMails via the eMail address in the form of "***nfo+ordner/suborder@domain.tld***" is not supported at the moment, however we are considering the possibilities of an implementation currently.

We are working on an implementation of Sieves feature via the customer center / Webmail.  
Sieve is a powerful filter for IMAP servers.

Unique solution ID: #1457
